

Toyota Forklift Part

Toyota Forklift Parts - In the U.S., Toyota Materials Handling inc., or TMHU, continues to be the top selling lift truck supplier since 1992. Proudly celebrating more than 40 years of service, the Irvine, California established company offers a comprehensive line of quality lift vehicles. Thanks to their reputation of superiority, reliability, and sturdiness, Toyota remains popular in this aggressive market. Quality is the cornerstone of Toyota's legendary Toyota Production System practiced at all manufacturing facilities, including TIEM, which is stands for Toyota Industrial Equipment Manufacturing, located in Columbus, Indiana. The majority of the Toyota lift trucks sold in the U.S. are manufactured here.

Every one of Toyota's manufacturing plants within Canada and the U.S. comply with the International Organization for Standardization or ISO 14001 standard. TIEM has been honored many times for its commitment to continual improvement, and its environmental systems. It is the first and only producer to offer EPA and CARB-certified Compressed Natural Gas powered lift trucks on the market. For example, the Toyota 8-Series IC lift trucks emit 70% less smog forming emissions than the current centralized EPA standards and have complied with California's strict emission standards and regulations.

Toyota Material Handling, U.S.A. - The Industry Leader

Brett Wood, President of TMHU, links Toyota's achievement to its strong dedication to fabricating the best quality lift vehicles while delivering the utmost customer service and support. "We must be able to learn and predict the needs of our customers," said Brett Wood. "As a leader, our success also depends on our ability to address our customers' operational, safety and environmental cost issues." TMHU's parent company, Toyota Industries Corporation, also known as TICO, is listed in Fortune Magazine as the world's largest lift truck dealer and is among the magazines impressive World's Most Admired Companies.

Redefining Environmental Accountability

Toyota Industries Corporation, as the parent company, has instilled a rich corporate doctrine of environmental stewardship in Toyota. Not a lot of other companies and no other lift truck maker can meet Toyota's record of caring for the natural environment while concurrently encouraging the economy. Environmental responsibility is a fundamental feature of corporate decision making at Toyota and they are proud to be the first and only maker to provide UL-listed, EPA - and CARB -certified Compressed Natural Gas powered lift trucks. Yet another reason they remain a leader within the industry.

Toyota first launched the 8-Series line of lift trucks in 2006, yet again exhibiting its leadership and innovation in the industry. Featuring an exclusive emission system that eclipsed both Federal EPA emission standards, and California's more environmentally friendly emission standards. The end creation is a lift truck that produces 70% fewer smog forming emissions than the present Federal standards tolerate.

Also in 2006, Toyota established an affiliation with the Arbor Day Foundation, furthering their obligation to the environment. Greater than 57,000 trees have been planted in regional parks and national forests damaged by environmental reasons such as fires, as a result of this relationship. 10,500 seedlings have also been circulated through Toyota Industrial Equipment's system of dealers to non-profit organizations and neighborhood consumers to help sustain communities all over the United States

Toyota's lift vehicles offer improved output, visibility, ergonomics and durability, and most significantly, the industry's leading safety technology. The company's System of Active Stability, also referred to as "SAS", helps reduce the risk of accidents and accidental injuries, and increasing productivity levels while minimizing the likelihood of merchandise and equipment damage.

System Active Stability senses several factors that may lead to lateral volatility and potential lateral overturn. When any of those factors are detected, SAS instantly engages the Swing Lock Cylinder to steady the rear axle. This adjusts the lift truck's stability trajectory from triangular in shape to rectangular, providing a major increase in stability which substantially reduces the likelihood of an accident from a lateral overturn. The Active Mast Function Controller or the Active Control Rear Stabilizer also aids to avoid injuries or accidents while adding stability.

SAS was originally released to the market on the 7-Series internal combustion products in 1999 and subsequently catapulted Toyota into the industry leader for safety. Ever since then, SAS continues to be integrated into the majority of Toyota's internal combustion machines. It is standard equipment on the latest 8-Series. There are more than 100,000 SAS-equipped lift vehicles in operation, exceeding 450 million hours combined. The increased population of SAS-equipped vehicles in the field, along with mandatory worker instruction, overturn fatalities across all brands have decreased by 13.6% since 1999. Additionally, there has been an overall 35.5% drop in industry wide collisions, loss of control, falls and tip overs from a lift truck for the same period.

Toyota's pattern of excellence reaches far beyond its technological achievements. The company maintains a widespread Operator Safety Training course to help purchasers meet OSHA standard 1910.178. Training packages, video tutorials and assorted materials, covering a wide scope of matters-from individual safety, to OSHA regulations, to surface and load conditions, are accessible through the supplier network.

Since the sale of its first lift truck in the U.S. to the manufacture of its 350,000th lift truck produced in 2009 at Toyota Industrial Equipment Manufacturing, TMHU has continued a unbroken existence in the U.S. This reality is demonstrated by the statistic that 99% of Toyota lift trucks bought in America today are built in the United States.

TMHU is based in Columbus Indiana and houses nearly 1 million square feet of production facilities over 126 acres of land. Facilities include a National Customer Center, as well as manufacturing operations and supply centers for equipment and service components, with the whole investment exceeding \$113 million dollars.

The new NCC was designed to operate for TMHU customers and dealers. The facility includes a 360-degree display room, a presentation theater complete with stadium seating for 32, an section for live product demonstrations with seating capacity for 120; a presentation theater; Toyota's Hall of Fame showcasing Toyota's history since the birth of its founder, Sakichi Toyoda, in 1867, and finally a education center.

The NCC embodies Toyota's dedication to providing top-notch customer service. TMHU's 68 certified Toyota Industrial Equipment, or TIE dealers, along with 189 dealership locations right through the U.S, present the most complete and inclusive consumer service and support in the industry. The company's new and Certified Used lift vehicles, service, components, and financing features make Toyota dealerships a one-stop shop to guarantee total client satisfaction.
